BERTHOUD WEBSITE

Visit a modern website, with an adaptive design, providing optimum readability, even on a tablet and telephone.

Find our detailed product sheets with technical and practical information and all of the product advantages.

Discover the group's history and advice from the pros so that you can take care of your garden like a professional.

SPRAYING SPECIALISTS SINCE 1895

1895 : Company founded by Paul Berthoud who wanted to industrialize the production of copper knapsack

1938 : The second generation Ferdinand and Jean Berthoud, his two sons, joined the company in turn.

1956 : Arrival of the third generation with cousins Guy and Didier whose priority is to attack the home market with a specific range «Flori-Leisure».

1969 : Centralization of all services (production, sales, despatch) in Villefranche-sur-Saône (France)

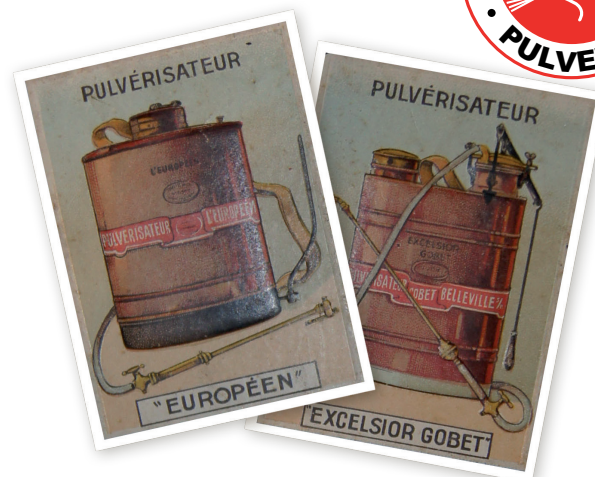

1987 : The company is taken over by Patrick Ballu and joins EXEL Industries, world leader in spraying.

BERTHOUD becomes one of the strongest brands at HOZELOCK-EXEL holding for many years almost 40% of the French market (in value), an undisputed leader.

Berthoud products are recognised as being highly professional. This is in part due to their agricultural origins and their long term market presence. It will come as no surprise that the company's core clients are the experienced gardener and the professional.

The company meets its customers' exacting requirements in three ways:

- by offering an unrivalled breadth of product range
- by offering impeccably engineered, high-performance sprayers
- by offering excellent after-sales service

A complete range of sprayers for 'Hygiene, Livestock and Dairy Farming'

With around 100,000 dairy cattle farmers, 15,000 pig farmers, other farmers of rabbits, goats and horses, France is said to be the "world's biggest farm". The need to vaccinate and treat the animals, together with the cleaning and disinfection requirements for the farm buildings constitute a huge potential market. For this reason, BERTHOUD has developed a specific range of sprayers that are perfectly adapted to these requirements.

MAM'SPRAY TRIGGER

101048

Teat hygiene

- 'XL' type sprayer head in polypropylene
- 'Hand' trigger
- Polycarbonate nozzle for spraying upwards (60° angle)
- Translucent injected polypropylene cylindrical reservoir and fully-opening top
- Total capacity: 500 ml
